

Collaborative Expectations

Collaborative members will have full authorship rights on the publications describing the outcomes of this unique study if the following expectations are fulfilled for the minimum three-month commitment.

Expectations for quality audit while pending Trust R&D approval:

- Attend at least 50% of online biweekly Collaborative meetings. Identify and collect data for all patients who undergo a surgical or invasive procedure and subsequently develop complications.
- Ask questions and provide feedback about data collection in the RESPOND team WhatsApp group chat.

Expectations after receiving Trust R&D approval:

- Supervise the screening and consent processes carried out by Research Nurses. Once R&D approval is granted in your Trust, the quality audit data collection will morph seamlessly into data collection for research, now performed by research nurses.
- Promote the study and the use of its component parts within their Unit.
